Safurex® Welders' Training and Certification

# SAFUREX

## Safurex® Welders' Training and Certification

Safurex is a proprietary material of construction (UNS S32906) for Stamicarbon critical High Pressure urea equipment and piping. This so-called super duplex stainless steel has excellent corrosion resistant properties to withstand the harsh environment of the ammonium carbamate, an intermediate product in the manufacturing of urea.

With respect to the welding of this proprietary material, Stamicarbon offers a Safurex® Welders' Training and Certification in North America in cooperation with our partner Welding Testing Laboratory Inc.

Welding Testing Laboratory is certified by Stamicarbon and plans, coordinates, and executes the welding trainings. Application for this training via Stamicarbon.

### What will welders learn during this training?

The training consists of a hands-on training on how to weld Safurex® material. Welders will be trained and certified in compliance with international standards such as:

- ASME Section IX
- API 1104
- AWS 01.0
- Stamicarbon specifications

Safurex® welders certificates will be issued by Welding Testing Laboratories and approved by Stamicarbon with a validity of 3 years.

### Who can sign up for the welding training?

Welders having experience for manual welding of duplex stainless steels and / or austenitic stainless steels will be submitted to the training. Participants need to indicate the purpose of their participation, supported by a written reference from an official user of Safurex®.

### Where will the training take place?

Welding Testing Laboratory Inc.  
4350 Scenic Highway – Baton Rouge, LA 70805
